

BRENDAN NG

Director for Events

About me

I am a First Year BioNatSci at Wolfson College. I like playing sports, especially basketball and volleyball, and strategy games like chess, card games, and mahjong. I am always ready to share my bold ideas and theories about the world with people around me and making everyone laugh.

Experience

I was in the Admin and Operations team for organizing the **International Science Youth Forum** in Junior College, bringing international students who share a passion for science research together to learn from famous Nobel laureates and each other.

As a **logistics supervisor** in the military involved organising events with different groups of people in constantly changing environments. I helmed in logistics and events management in Brunei, Taiwan and even Singapore's National Day Parade.

Why Me

I would love to use my experiences to spread my love for fun to SciSoc by organising crazy fresh (ok maybe not too crazy) activities and providing the most enjoyment to everybody.

More Social Gatherings

I want to **organise activities weekly** whether they are online or in-person for everyone in SciSoc to know each other better and make more friends.

Mixing with other societies

Coordinating with more societies and planning a bigger and more fun event gives everyone a chance to make more friends and learn from each other. (Mixers, Blind dates anyone?)

Hearing from you

The best activities are formed from your opinions. Your frequent feedback on what events you would like to see helps to maximise participation and your happiness.

BRENDAN NG

Director for Logistics

About me

I am a First Year BioNatSci at Wolfson College. I like playing sports, especially basketball and volleyball, and strategy games like chess, card games and mahjong. I am always ready to share my unthinkable ideas and theories about the world with people around me and making everyone laugh.

Experience

I was in the Admin and Operations team for organizing the **International Science Youth Forum** in Junior College, an event that brings international students who share a passion for science and research together to learn from famous Nobel laureates and each other.

My role as a **logistics supervisor** in the military involved timely logistical support for the batallion. I participated in logistics and events management in Brunei, Taiwan and even Singapore's National Day Parade.

Why Me

With my experiences and being outgoing, I can coordinate with the team to supply everything that is needed for SciSoc events to flow smoothly and stably.

Merch

Hoodies? Folders? Keychains? I am sure members of SciSoc are dying to showcase our magnificent society to everyone.

Stability

Continuing past trends of logistical stability and improving on them further can guarantee maximum welfare from everyone in the society.

Your Voice

Your feedback on logistical provision is important and could determine the type of snacks you see in future talks.
